

The image shows a VS Code editor window with a file named `introduction.py` open. The code is as follows:

```
1 #import streamlit
2 import streamlit as st
3
4 #Add a title to your app
5 st.title("My First Streamlit App Created by Rashmi Balurkar")
6
7 #Add some text
8 st.write("Welcome! This app calculates the square of a number")
9
10 #Create an interactive slider
11 st.header("Select a Number")
12 (import) st: Module("streamlit").(00,25)
13
14 * See Real World Examples From GitHub
15 st.subheader("Result")
16 squared_number = number * number
17 st.write(f"The Square of {(number)} is **{(squared_number)}**.")
```

The terminal at the bottom shows the command `streamlit run introduction.py` being executed. The output indicates that the app is running on `http://localhost:8502`.

My First Streamlit App Created by Rashmi Balurkar

Welcome! This app calculates the square of a number

Select a Number

Pick number

Result

The Square of 43 is 1849.
