

User defined Module:

Pycharm code

A screenshot of the PyCharm code editor showing the file `test.py`. The editor contains five function definitions: `add(a,b)`, `sub(a,b)`, `mul(a,b)`, and `div(a,b)`. Each function has a docstring `1 usage`. The `sub` function is currently selected, and the cursor is at the end of its `return a-b` statement.

```
1 def add(a,b): 1 usage
2     return a+b
3 def sub(a,b): 1 usage
4     return a-b
5 def mul(a,b): 1 usage
6     return a*b
7 def div(a,b): 1 usage
8     return a/b
9
10
```

A screenshot of the full PyCharm IDE. The `Project` tool window on the left shows the project structure with `calc.py` and `test.py` in the `.venv` library root. The main editor shows `calc.py` with code that imports from `test` and prints the results of `add`, `sub`, `mul`, and `div`. The `Run` tool window at the bottom shows the execution output, indicating that the process finished with exit code 0.

```
1 from test import *
2
3 a = 10
4 b = 5
5
6 di = div(a,b)
7 ad = add(a,b)
8 mu = mul(a,b)
9 su = sub(a,b)
10
11 print(ad)
12 print(su)
13 print(mu)
14 print(di)
```

Run calc x

```
"C:\Users\SID Balurkar\PycharmProjects\PythonProject\.venv\Scripts\python.exe" "C:\Users\SID Balurkar\PycharmProjects\PythonProject\calc.py"
15
5
50
2.0
Process finished with exit code 0
```
